EDUCATION

University of Toronto Sep 2021 – Sep 2026 | Toronto, Canada
*Bachelor of Computer Science: Specialization in **Software Engineering***
• Relevant Coursework: Computer & Network Security, Database Systems, Software Systems, Data Structures & Algorithms, Distributed Systems

SKILLS

Languages: Python, Java, JavaScript, TypeScript, C/C++, C#, SQL
Frontend: React, Node.js, HTML/CSS, REST APIs, Single-Page Applications (SPAs), Angular
Backend and Data: PostgreSQL, MongoDB, AWS, Azure, Docker, Linux, ETL Pipelines
AI and Tools: OpenAI API, Git/GitHub, Jenkins, CI/CD, Agile/Scrum, Jira, BDD Testing

EXPERIENCE

Full-Stack Software Developer Intern Jan 2025 – Dec 2025
SOTI
• Shipped **full-stack features** using **React, TypeScript, and Node.js**, decoupling legacy cloud infrastructure to deliver **\$1M+ in annualized savings** for **17,000+ enterprise customers**.
• Built and optimized **RESTful API integrations** using **OAuth 2.0**, conducting peer code reviews and ensuring secure, low-latency payload processing across enterprise authentication workflows.
• Automated **test coverage from 10% to 85%** by developing **20+ BDD scenarios** across **Jenkins CI/CD pipelines**, reducing regression bugs through structured root-cause analysis during Agile sprints.

Software Developer Intern May 2024 – Aug 2024
Ontario Health
• Diagnosed and resolved production data pipeline failures for healthcare applications (DCIS, CorHealth) through **root-cause analysis**, improving **SQL ETL processing performance by 20%**.
• Enforced **data governance and peer code review** standards across **Azure cloud** deployments, ensuring **100% PHIPA regulatory compliance** and reducing production errors by **25%**.

Project Assistant May 2026 – Present
University of Toronto
• Maintained technical documentation and operational tracking systems using **SharePoint**, ensuring data accuracy and compliance across multiple concurrent university workstreams.

PROJECTS

CoBuild  Apr 2023 – Aug 2023
AI-Powered Recruiting Tool
• Built an **AI-powered application** using the **OpenAI API** and **Python** backend to automate submission scoring and reporting, accelerating decision-making by **30%** and cutting processing time by **40%**.
• Engineered **RESTful API endpoints** in Node.js achieving **sub-50ms response times** and migrated assessment data to **MongoDB**, improving retrieval speeds by **25%**.

SecurAid  Sep 2024 – Dec 2024
Secure File Sharing Platform
• Developed a secure enterprise file-sharing platform in **Java**, implementing **OAuth 2.0** authentication via **AWS S3** and remediating **OWASP security vulnerabilities** through IAM role enforcement and access control workflows.
• Conducted **SAST** and integrated the VirusTotal API for automated security scanning on file uploads, enforcing security-first coding practices to ensure application integrity and compliance.

Concurrent Linux System Monitor Jul 2023 – Aug 2023
POSIX Resource Tracker
• Engineered a **multithreaded system monitoring utility in C/C++** using **POSIX APIs**, interfacing directly with kernel data structures to track hardware utilization at **under 1ms execution latency**.
• Implemented process lifecycle management, maintaining a **near-zero memory footprint**.

LEADERSHIP & VOLUNTEER EXPERIENCE

UTSC Cricket Jan 2025 – Sep 2025
Captain
• Led a **10-player team** to the semi-finals, analyzing performance metrics to optimize strategy and driving measurable improvements of **1+ wickets and 2+ catches per game**.
